

Docket Nos. 42310 & 42311
Georgia Power Company's 2019 IRP and 2019 DSM Application
STF-DEA Data Request Set Number 1

STF-DEA-1-40

Question:

Why is there very little discussion of winter peak demand in the load forecast sections of the IRP if winter peak reliability is becoming a concern?

Response:

A detailed discussion of the need for seasonal planning and winter reliability concerns can be found in the Reserve Margin Study section of Technical Appendix Volume 1. The peak demand forecast is just one input into the Reserve Margin Study.
